

Partner questions, answered directly

The questions partners ask, with the mechanism behind each answer.
Where the answer is a limit, we say so.

WORKING WITH A NEWER VENDOR

Why bet a client relationship on a new vendor?

Do not bet the account on us. Start with a bounded, partner-led proof engagement with a defined scope, written acceptance criteria, and a joint escalation model. If it does not meet the criteria, it ends there and the client relationship is untouched.

MECHANISM

Paid pilot SOW

Readiness checklist

Acceptance test

Named escalation path

Post-engagement report

Can a team this size support us?

We cap accredited launch cohorts and delivery capacity, and we do not oversell. The model transfers repeatable work to trained partner teams while AdaptCloud retains product escalations. If we cannot support a cohort, we say so before you commit sellers, not after.

MECHANISM

Capacity plan

Partner tiering

Onboarding gates

Service-level boundaries

Who are your references?

We will not invent references. For initial programs we offer a joint reference path: an NDA case study with a measured baseline and outcome, and the option for the partner to use the engagement as its own reference. Reference rights move up a ladder — internal evidence, anonymized case study, named case study, reference call — each step requiring specific client permission.

MECHANISM

Reference agreement

Anonymized case-study template

Client permission workflow

What if you do not survive?

We address continuity contractually and architecturally: exportable evidence in open formats, documented configurations, and an agreed transition or escrow plan proportionate to the engagement. Your client's evidence is not hostage to our corporate status.

MECHANISM

Data export terms

Transition assistance

Source escrow where commercially appropriate

Continuity plan

DELIVERY AND OPERATIONAL RISK

What if it fails in a client environment?

The partner remains the client-facing delivery lead. AdaptCloud provides second-line product support, documented rollback procedures, and agreed severity targets for the supported scope. Ownership of the client conversation does not change mid-incident.

MECHANISM

Support policy

Incident process

Release notes

Rollback plan

Severity matrix

Can our consultants deliver it without you?

Yes, after accreditation. We co-deliver the first engagements to transfer the method; accredited consultants lead subsequent engagements while we provide second-line support. Only accredited personnel may lead a production delivery, which is a rule we hold to rather than a preference.

MECHANISM

[Certification path](#)[Facilitator guide](#)[Delivery runbook](#)[Partner sandbox](#)[Quality gates](#)

Will this work for our clients' environments?

We qualify environment fit before the statement of work. Where prerequisites are not met we identify that explicitly rather than burying it in implementation and discovering it in week three.

MECHANISM

[Discovery questionnaire](#)[Deployment prerequisites](#)[Integration matrix](#)[Exclusion list](#)

What is the implementation timeline?

We provide a phased plan with prerequisites, partner and client responsibilities, weekly checkpoints, and a written definition of done. We do not quote a universal timeline before qualification, because a timeline given before discovery is a guess wearing a date.

MECHANISM

COMMERCIAL TERMS

Where is the margin?

We publish margin bands by role and attach model. Partners choose the commercial model per deal, and the economics are transparent before you invest sales or delivery capacity. Bands rather than one fixed percentage, because deal quality, services intensity, and volume all move the number.

MECHANISM

[Rate card](#)[Discount schedule](#)[Sample deal economics](#)[Program funds where offered](#)

Will you go direct on our demand?

No. Registered accounts are partner-protected. We do not sell direct into partner-sourced or partner-led registered opportunities without written consent. It is a contract term, not an assurance.

MECHANISM

Deal registration

Protection term

Non-circumvention clause

CRM attribution

Will you undercut us on price?

Partner-led opportunities follow registered-opportunity pricing. Any exception requires joint approval, and we do not quote below the agreed partner floor into protected accounts.

MECHANISM

Pricing governance

Opportunity registration

Discount-approval rules

Partner price floor

Can we white-label it?

We support a defined co-branded or partner-led delivery model. White-labeling is a commercial and support commitment rather than an informal promise, and it is available only at accredited tiers.

MECHANISM

Brand-use policy

Tier benefits

Minimum commitments

Support boundaries

What exactly are you selling?

Three separable components: platform subscription, partner-delivered professional services, and optional AdaptCloud enablement and support. Customers and partners can see each cost and each responsibility rather than a bundled figure.

MECHANISM

Offer catalog

Order form

SOW templates

RACI

Why not use an established platform?

Use the incumbent where it is already the operational standard. Use AdaptCloud where the constraint is repeatable evidence, faster control implementation, or a partner-owned delivery motion. We compete on a defined wedge and do not claim to replace every platform.

MECHANISM	Narrow-use-case comparison	Time-to-evidence benchmark	Library coverage metrics
-----------	----------------------------	----------------------------	--------------------------

Is the evidence defensible?

Every output is traceable to its source, version, execution context, reviewer, and supporting artifact. We distinguish platform-generated evidence from client-attested evidence, so a reviewer can tell which is which without asking.

MECHANISM	Provenance model	Evidence schema	Sample export	Audit trail	QA review procedure
-----------	------------------	-----------------	---------------	-------------	---------------------

Is AI creating unacceptable risk?

AI assists analysis and workflow. It does not replace accountable human review and does not make unsubstantiated compliance determinations. High-impact outputs are reviewable, traceable, and policy-controlled.

MECHANISM	Human-in-the-loop policy	AI usage statement	Logging	Output review controls
-----------	--------------------------	--------------------	---------	------------------------

AdaptCloud does not independently grant certifications and does not replace the judgment of an authorized assessor, auditor, or client accountable official. Margin bands, protection terms, and support levels are indicative and are set in the partner agreement. Nothing on this page is legal advice.
