

ADAPT CLOUD

Ideas to impact.

Discover. Design. Build. Govern. Manage.

Adapt Cloud applies this method to your AI priorities, combining specialist Claude advisory with hands-on engineering. We work with your team from the initial business case through ongoing governance, operation and improvement.

An annual service built around your priorities

An initial term of 12 months or longer, renewable by agreement. Monthly working reviews and a rolling 90-day plan guide the advisory and engineering work.

A plan for the next 90 days

We establish the current position with your business and technical owners. Together, we choose the improvements worth pursuing and revise the plan as evidence and priorities change.

Engineering capacity to act on the plan

The agreement reserves capacity for approved improvements. Each has a scope, an owner and acceptance tests. Larger changes are scoped separately, with your approval before work begins.

A business review of the results

Monthly reports cover performance, total cost, completed work and unresolved issues. Quarterly reviews assess whether the benefit justifies further investment and what should change.

A named Adapt Cloud delivery lead stays accountable throughout the term.

ADAPT CLOUD

Ideas to impact.

The method in practice.

- | | |
|--------------------|--|
| 01 DISCOVER | Understand the business need, current systems and costs. Establish the baseline and identify work worth pursuing. |
| 02 DESIGN | Define the solution, data boundaries, responsibilities and acceptance criteria. Agree the scope and investment. |
| 03 BUILD | Implement and integrate the solution. Test its performance and controls, then release it with approval and a rollback plan. |
| 04 GOVERN | Apply access, data, cost and change controls throughout the work. Maintain approval records and evidence of compliance with agreed requirements. |
| 05 MANAGE | Review performance, resolve issues and plan improvements within the service scope. Feed the findings back into Discover. |

PromptForce.AI from DayTwoAI

The engagement includes PromptForce.AI from DayTwoAI.com as a platform accelerator for readiness assessment and reusable development components. Adapt Cloud leads the advisory, integration and engineering, and reports on the agreed work.

Platform access, usage, support and provider responsibilities are set out in the agreement.

Governance and management continue

Govern applies from discovery onward. Manage maintains the operating review and improvement plan throughout the term. The statement of work defines accountability, capacity, acceptance and remedies for missed commitments.

Monthly working reviews and quarterly business reviews guide the next cycle. Renewal follows a review of results and agreement on the next term.
